Yanks Advance on Two Fronts
As German Resistance Stiffens:
B-29s Blast Steel Mills in Japan

Released by Western Newspaper Union.

(EDITOR'S NOTE: These opinions are expressed in these columns; they are those of Western Newspaper Union's news analysts and not necessarily of this newspaper.)

THE INVASION:

Steady Progress

Supported by the greatest air fleets in battle history, Allied forces continued to expand their beachhead area in Normandy in the face of stiffening resistance on many fronts.

U. S. forces in the northwest of Cherbourg surged past Montebourg, which was still being contested, and captured Quineville on the east coast of the Cherbourg peninsula. Hammering to the west across the peninsula on a 10-mile front, the Yanks met stiff resistance from crack grenadiers of the fifth German tank division thrown into the Normandy fighting.

A communiqué from General Eisenhower's headquarters said that steady progress had been made west of Carcassonne across the base of the Cherbourg peninsula and between the Elbe and Vire rivers toward St. Lo, key junction 15 miles southeast of Carcassonne.

PACIFIC:

Action Here, Too

U. S. citizens got a breath-taking indication of the mighty striking power of their war-trained forces when within ten days of the European 10-day, terrible blows were dealt the Japanese on the opposite side of the globe.

Day before the new Super-Flying Fortress bombed Japan proper, a powerful navy sea and air force blasted the outer defenses of the island of Saipan in the Marianas to prepare the way for the landing of American troops on that strategic Japanese island.

To wrest Saipan from the Japanese, Americans had a job which was no picnic. The island of Saipan was a powerful navy sea and air force blasted the outer defenses of the island of Saipan in the Marianas to prepare the way for the landing of American troops on that strategic Japanese island.

Battle Westward

All along a 10-mile front, units of the American Fourth division and the 29th Air-Borne division were battling westward against stiff resistance in a drive to pinch off the peninsula, and with it the prize port of Cherbourg.

Nazi Field Marshal Erwin Rommel had thrown approximately 700 tanks into the fighting on the eastern front and was being pushed back far more infirmly than the German command intended to use for the purpose of the invasion.

Despite early successes on the invasion front, a word of warning came from Secretary of War Simon who said that Allied troops in Normandy soon must face fiercer counter-blows "than any we have ever met."

While the troops on the Normandy coast were fighting off the German counter-attacks on land, residents of England itself were dealt a serious "anti-invasion blow" when a fantastic stream of pilotless Nazi bombs rained fire and explosives across the island. This was Hitler's long-awaited "secret weapon" and no attempt was made by the British authorities to minimize the effectiveness of these robot, radio-controlled bombing plane attacks.

CONVENTIONS:

In Chicago

As the advance guard of the Republican party convention delegates began arriving in Chicago political dopesters had not yet awarded the Presidential nomination to Gov. Thomas E. Dewey of New York but friends of Gov. John W. Bricker of Ohio would not let their candidate be counted out without a battle.

They said that the contest for the nomination would go to the convention floor.

Bricker sources could not see a first-ballot victory for Dewey. However, the New York governor entered the convention with more delegates actually pledged to him than any other candidate, including Governor Bricker.

Officials in charge of arrangements for the Chicago meeting revealed that the candidate selected would probably make his acceptance speech from the convention floor on the day after his nomination.

Meanwhile the Democrats announced that Gov. Robert S. Kerr of Oklahoma would keynote their convention scheduled for July 19, also in Chicago.

PRICE CONTROL:

Parity for Farmers

Under terms of the bill extending the price control mastery of OPA, as passed by the House, processors, who fail to pay a parity price for adjustment of farm commodities, are allowed to charge only 90 percent of the OPA ceiling for the finished article.

Parity is a price calculated to make farm purchasing power equal to that prevailing from 1890 to 1914. Farm leaders had the support of the administration in putting through the measure in this form after the controversial cotton ceiling adjustment provision had been knocked out of the bill as passed by the senate.

This cotton provision and the parity issue were the main problems between the house and senate conferences.

Once in the President's hands the bill still faced the threat of a veto because of amendments to it which would allow OPA regulations open for legal tests in the regular federal district courts.

WOUNDED YANKS:

Death Rate Cut

Of every 100 American soldiers wounded in battle, 70 are saved, according to Maj. Gen. Norman Kirk, surgeon-general of the U. S. army.

The navy has an equally impressive record. In World War I the death rate of the wounded was 38 percent. Now it is less than 3 percent.

Advances in the treatment of the most often fatal, resulting in death in 25 percent of the cases. This, however, is a great improvement over 50 percent when wounds were deep. Penetrating chest wounds are now fatal in less than 25 percent of cases, and in the first World War more than half the men so wounded succumbed. A still greater advance has been made in the treatment of head wounds. Now only 4 percent die, as compared with 14 percent in the last war.

Umberto of Italy

Another big company is being investigated by the OPA for buying up new tires of various makes from the government.

There may be some starting new breaking on this one.

GERMANY'S HEART CHOICES

U. S. experts who have studied the Nazi military setup to resist invasion in the German Reich have found that the German army has been the job of combating what the Nazis know is the death thrust at it.

No. 1 is Field Marshal Karl von Rundstedt, considered the best strategist and the best commander in Germany. Field Marshal Erwin Rommel, immediately under him, is the best tank and lightning move commander.

Finally, Colonel General Heinz Guderian is considered the best tank commander in the German army.

U. S. experts, who believe in looking facts in the face, classify them as the top top military brains of Europe.

DAYLIGHT SAVING TO END? It is a question that many people are going to be abolished without giving the President a chance to block it.

Several resolutions have been introduced to abolish war time, as a result of protests from farmers in agricultural areas.

These are now before Representative Clarence Lee of California and his Interstate Commerce committee, and it looks as if it will be passed.

If so, it cannot be vetoed by the President, for the original bill establishing war time provided that it was to end six months after the war.

The latter provision precludes a veto, and the resolution is now being considered by the House.

In fact, Congressman Lee wrote his original daylight-saving bill in 1918, and it was the subject of hearing of the White House in case Congress wanted to abolish war time.

CAPITAL CRAFT

A Congressman to Lieut. Harry R. Pugh Barnhart for bringing laughs to the boys in the South Pacific with his army show "Stars and Gripe."

Every day the department condenses foreign news developments for its officials both at home and abroad. It is one of the fairest news summaries.

The war is starting a school of government, similar to the army's school at Fort Belvoir, to train men to govern occupied territories. Some navy men are wincing at that.

They don't see that the government occupation because the British take over all Pacific possessions as soon as we capture them. (The Solomon Islands were largely British before the war.)

HOUSEHOLD GOODS:

More than 12,000,000 families would like to buy alarm clocks, a survey conducted by the census bureau for the War Production board during April indicates. The study was made among 4,500 representative families to guide the WPB.

The survey covered demand for 56 types of household goods. It showed that the percentage of "satisfied buyers" ranged from 98 percent for vacuum cleaners to 5 percent for wash boilers and lawn mowers.

Washington, D. C.

UNPROTECTED COMBAT FIGHTERS

One thing that grips the boys at the front is the lack of the dash officers in the war department and others here at home seem to get promotions more easily than the boys who are up on the firing line. Some of them feel so badly about it that they aren't keen to come home, though given opportunities of through, because they are out-ranked by their old friends at home.

For instance, at the front, the boys just arriving in England are second lieutenants. They haven't been on any missions at all. Meanwhile, some boys have been in England for two years, and have been flying over Europe constantly, still remain second lieutenants.

"How many do you have?" asks some newly arrived pilot who has flown twice across the channel, each flight being a mission for the front.

THE-PRICE PROBLEM

The Office of Price Administration is quietly probing several cases of ration violations which promises to be sensational. They go right to the heart of the matter.

One of the big tire companies is being probed on a charge of having failed to demand the ration certificates turned in to them by retailers.

Another big tire company is being probed on a charge of having failed to demand the ration certificates turned in to them by retailers.

Today, the allies have produced the best jungle fighters in the world. We are daily beating the Japs at their own game.

And today, I was reminded of something else after another battle with another anonymous villain, of another time and place.

He told me some things about the air force and it was better to be in Europe and I realized that it wasn't so much important as it seemed. He told me some things about the air force and it was better to be in Europe and I realized that it wasn't so much important as it seemed.

Today, just as the allies have out-jungled the Japs, they have out-Lufthawed the Luftwaffe. In the latter case, we must admit the Germans taught us in Africa how they did it.

Triphibious Warfare

We will be able to understand the strategy of Europe much better if we understand a little more about the two roles which the allied air force has played in the European campaign.

Germany's book and learned what it means to coordinate the efforts of the air force and the army, the soldier and the sailor, especially in what is now generally called "triphobious warfare."

First, it might be well to state clearly the difference between the tactical bombing in the European theater and the strategic bombing in the Pacific theater.

We are interested at present in the tactical bombing in the European theater, the destruction of enemy strength at a distance. Tactical bombing is the destruction of enemy strength at a distance.

Because the valuable quality of air power is flexibility, the two roles sometimes overlap, but in general, the tactical bombing is the destruction of enemy strength at a distance.

Tactical bombing is the quick answer to instant needs—it is the answer to the need for the quick answer to instant needs.

Strategic bombing is aimed, as we have seen, at factories, at all installations which contribute to the enemy's war effort: railway lines, junctions, military bases, rolling stock and all means of transportation and communication.

The targets in tactical bombing are more varied and will be mentioned later.

The Final Phase

We are interested at present in the final phase of the European war, so it might be well to describe the preliminary efforts before, and the continued effort after, the assault on an enemy shore.

The Sicilian campaign is a good example.

The first job of the air force had to be to remove an obstacle enroute. That obstacle was the island of Sicily, and you remember what happened to it. It was flattened into a level plain in two days.

Then the real "triphobious" effort began. It followed a pattern which is pretty much the one accepted for invasion of men against a fortified coast.

The first step is the neutralization of the enemy air force and this is a job which has to be done before the invasion of the enemy shore.

This means the destruction of air bases and other distant vital areas, later, providing fighter coverage for the beaches and for shipping.

The Germans had a thousand planes based on or near Sicily. Thirty-one of the airbases had been attacked in the preliminary phase for a month. That communications were bombed in order to isolate Sicily as nearly as possible, and the second in the list of the bomb's functions. Messina was a chief target for it was a convenient base for the German air force. Also the principal rail lines running down the coast of Italy were hit.

Telephone exchanges and stations where radio sets were located were hit. This is another thing the Germans taught us in their invasion of Sicily. It is another thing the Germans taught us in their invasion of Sicily. It is another thing the Germans taught us in their invasion of Sicily.

In Sicily itself, the enemy bases had been so thoroughly destroyed that the Germans couldn't get enough planes to operate. Their radio sets were often set up in these villages. They were located by radio detection.

The fourth function of the tactical bombing, which is to break down the digital communications, is referred to before—destruction of telephone and radio installations.

Ground Troop Support

The fifth is the close support of the ground troops. This was achieved in Sicily with more success than was fully realized at the time. Some commanders of the landing troops complained that the ground troops were not fighting as well as they should. Later some of these same commanders who were in the ground troops saw the wrecked armor cars, tanks and other equipment strewn about the beach. They saw the enemy had been laid back by the attacks from the air.

In Sicily, meanwhile, troops were dropped behind the lines, and contributed its share to the success of the invasion. We know how well the ground troops have operated in the Pacific theater and in Burma. This job is listed as sixth in air force tactical operations and includes carrying of paratroopers, dropping of supplies and towing gliders which land personnel and equipment. (The glider pilot fights with the land forces since he can't glide uphill.)

We know of the recent time when the ground troops have been captured and reactivated in the Pacific theater of war. In New Guinea, the ground troops were captured and reactivated in the Pacific theater of war. In New Guinea, the ground troops were captured and reactivated in the Pacific theater of war.

Washington, D. C.

Early in the war with Japan, when the little men of Nippon were streaming down the Maylayan Peninsula at an unbelievable rate through impenetrable rain and rolling hills, the German air force was the first to be seen.

After a while, I had a talk with a wise old military campaigner, and the second in the list of the bomb's functions. Messina was a chief target for it was a convenient base for the German air force. Also the principal rail lines running down the coast of Italy were hit.

Telephone exchanges and stations where radio sets were located were hit. This is another thing the Germans taught us in their invasion of Sicily. It is another thing the Germans taught us in their invasion of Sicily.

Hindus Have Great Variety
Of Musical Instruments

The Hindus of India are believed to play more different kinds of musical instruments than are found in all other countries together, says Collier's. Because almost all of their earliest instruments have remained in use, these people now have several thousand, including some 300 varieties of orchestral drums.

In fact, their most popular is still the vina (a primitive instrument with seven strings) which was invented more than 1,300 years ago.

HIGHLIGHTS . . . in the week's news

PAIN DETECTOR: An electrical device, said to be able to detect diseased organs of which the patient is unconscious, was demonstrated at the convention of the Gastro-Enterological association meeting in Chicago. Dr. Lester Morrison of Philadelphia read a paper on the machine, and explained that it operated by the "diagnostic reaction" of the patient.

FACTORY WAGES: In April earnings of factory workers on an hourly basis reached a new high at \$1.07 per hour, the National Industrial Conference reports. Because of a shorter work week however, total earnings were somewhat lower, \$48.08 on the national average, down 1.1 percent from March. Average work week was 42.3 hours in April.

HOUSEHOLD GOODS: More than 12,000,000 families would like to buy alarm clocks, a survey conducted by the census bureau for the War Production board during April indicates. The study was made among 4,500 representative families to guide the WPB.

THE SILENT WAR: The war is starting a school of government, similar to the army's school at Fort Belvoir, to train men to govern occupied territories. Some navy men are wincing at that.

News Of Rowan County's Scouts

The Board of Review will meet Friday, June 30, at the Science building, that will give Scouts two weeks to work on advancements. Friday, July 14, a Court of Honor will be held to award the badges passed at the board of review.

Wednesday, June 7, Troop 77 hiked out to the local Scout camp and put new roofing on one of the cabins. It was Rev. Cooper's first time to visit the camp and the first time we really have done much work out there. Anybody wishing to stay at Camp Offutt for a week must register at once and hand in your fee (\$1.00) to Rev. Cooper. All Scouts are strongly urged to go since we just lack two more boys of having enough.

'Home In Indiana' One of Year's Outstanding Films, With Many Kentucky Scenes, To Have One Of First Showings At Trail Theatre

"All the thrills of 'Kentucky'!" All the magnificence of "Maryland!" "A simply wonderful picture!"

That's the essence of the unanimous review acclaim coming out of Hollywood on 20th Century-Fox's new Technicolor hit, "Home In Indiana," the film based on the famous Saturday Evening Post serial, "The Phantom Filly," by George Agnew Chamberlain, and opening Saturday at the Trail theatre.

Featuring Walter Brennan, Lon McCallister, Jeanne Crain, Charlotte Greenwood, June Haver and an outstanding supporting cast, 20th Century-Fox's monumental trilogy of films of which "Kentucky" and "Maryland" were the first two depicting the exciting drama, romance and thrills of one of America's great traditions is brought to a triumphant climax with "Home In Indiana."

As in the previous films, the studio again captured breath-taking beauty, Technicolor realism and full flavor and authenticity only by painstaking research and extensive location trips. The talent. Film newcomer, Jeanne Crain, as the Phantom Filly, is assembled by Producer Andrew Davis, and headed by Director Stardom in the role of "Char-

Henry Hathaway, roved over three states — Indiana, Kentucky and Ohio—shooting against the "apple pie" backdrop of actual country fairs. Grand Circuit harness racing and the nation's most picturesque breeding farms. All in all, the making of the film involved one of the largest location companies and longest shooting schedules of the motion picture year.

"Home In Indiana" tells an unusual story of young love set against the background of flashing hoofs, pounding hearts and thrilling moments of Grand Circuit racing.

A three-time Academy Award winner, Brennan, who appears as "Thunder Bolt," won one of the "Oscars" for his character role in "Kentucky," and also played the top character part in "Maryland." In the role of Sparky, Brennan's young nephew who has a lot to learn about women and horses, Lon McCallister, remembered for his spectacular success as "Colt" in "Stage Door Canteen,"

Bruc, while blonde and beautiful June Haver plays her rival for the affections of Sparky.

Charlotte Greenwood chalks up a screen "first" in "Home In Indiana" with her performance as "Penny Bolt"—the first time the tall-comedienne is seen in a straight dramatic film role. Also featured in the cast are Ward Bond and Charles Dingle.

Unique in conception, "Home In Indiana," while set in contemporary U. S. A., is devoid of any reference to the war. The film stands by itself—a warm, human drama of the peacetime world. Director Hathaway explains, "We feel it is an important contribution to the war effort despite this, and because of this, since it reminds both military and civilian audiences of peacetime pursuits—self to recognize anew the peacetime values for which we are all working and fighting."

The government apparently saw eye-to-eye with Hathaway, since "Home In Indiana" was tabulated for warfront showing long before its domestic release date.

With And Blight In Garden Can Be Prevented

With the disease which causes plants to become parched looking at about the time they bloom (to matos, watermelon) or at heading time (cabbages) for a short time they appear to make recovery over night, but ultimately they die with the leaves attached. The germs live over in the soil and all can be done is to use varieties that can persist in sick soil as break of day, marglobe, rutgers tomatoes; Kleckley No. 14 and restant stone mountain watermelon, and Wisconsin all seasons and Wisconsin No. 5 cabbage.

Blight is a disease of the foliage of all vegetables (but cabbage and onions). It starts with scattered spotting but soon the entire leaves are covered and turn brown and drop off.

The germs are air-borne and the control is to spray with Bordeaux mixture every two weeks. Bordeaux mixture is made of blue stone, lime, and water. Both blue stone and lime can be purchased at the local drug stores.

15 feet per person for table use.

Gardeners will find that they still have plenty of time to plant a good variety of vegetables. Insects have caused very little damage but may multiply rapidly within the next few weeks. Garden sprays are available at the local stores and some types of insecticides can still be purchased.

Mr. L. A. Vennes, marketing specialist at the University of Kentucky, reports that cattle and calf numbers have increased rapidly since the drought period of 1934-36 and have now reached an all time high. For the United States all cattle averaged 67,463,000 for the period 1937-41. On January 1, 1943, numbers were estimated at 79,114,000 and by January 1, 1944, there had been an increase to 82,192,000. Greatest increases in numbers occurred in the Plains States with the Corn Belt States also showing large increases. In Kentucky the average numbers on January 1 for the period 1937-41 were 1,196,000, in 1943 they were 1,396,000 and on January 1, 1944, numbers had increased to 1,438,000.

Marketings of cattle have been running heavier than a year ago, but not as heavy as two years ago, and slaughter at federally inspected plants was 9 per cent greater during the first three months of this year than for the same period last year. Marketings of slaughter cattle may be expected to continue heavy throughout the next few months with extremely heavy marketings occurring toward the end of the current pasture season. Should the movement of slaughter cattle from the Range and Plain States coincide with the movement of grass cattle from the Corn-Belt States, packing plant capacities may be taxed during the early fall months. Should this occur, cattle prices may break badly as the packers attempt to regulate the flow of marketings. As of this date there is no price support program in effect for beef cattle. Kentucky cattlemen will want to give consideration to marketing their cat-

tle as early as practicable this year. Where the condition of the cattle and the available feed supplies permit, plans should be made to market either before or after the season of heavy runs of grass cattle. This may mean carrying some cattle over until after the first of the new year.

College's Part Training Sailors Told In Article

Following is the article written by Emmitt Bradley, publicity director, that appears in the current issue of "In Kentucky" official publication of the Commonwealth describing Morehead College's plan of caring for the 600 sailors in training here:

"A long whistle is heard and the special Navy train rolls into view around the curve. Amid great clouds of steam the train grinds to a stop and the blue-jackets of the new division step ashore for the beginning of their course at the special Navy Training School (Electrical) at Morehead State Teachers College.

"The sailors are met at the station by the division officer who, after checking their papers, calls the men to attention and soon the section is marching to their first stop, the mess hall. Then the men are marched to the barracks and given room assignments. After this the men are given a physical examination.

"The new division is then divided into five sections of thirty men each with a section leader and assistant section leader for the individual groups. Every man is then assigned to fire, cleaning, and security stations. At the end of two weeks a study leader for each section is appointed.

"With these preliminaries out of the way, the new trainees are ready to start on their course of training.

"There are six hundred sailors enrolled in study at all times; 150 of these men finish the course each month and in turn are replaced by 150 new trainees. The course lasts for sixteen weeks and is divided into six classes. These classes are mathematics; mechanical shop, including motor repairs; sketching and blue print reading; electrical theory; electrical laboratory; and wiring. The laboratory courses are divided into units. Each unit of the laboratory course is taught by a specialist. The program is carefully integrated so that one week the trainees study the mathematics necessary for understanding the electrical theory to be studied the following week and then the laboratory that follows takes up the particular phase of electrical theory just studied.

"This is a serious program. The men are here to work and they do work. Grades are posted each week so that the men can note their progress. If they fail, the Navy wants to know why. Each man works in classrooms and laboratories from 7:00 to 5:00 each day with a minimum of one hour each day in the physical fitness program. Those who need it, practice in the spacious indoor

swimming pool. For, of course, each sailor must be able to swim. Then after supper, there is quiet hour from 7:30 to 8:30. Classes meet six days each week.

"To initiate this program the college had to equip shops for such courses as motor repairing as well as several electrical and wiring laboratories.

"Under terms of contract with the Navy, the college furnishes teachers and instructional supplies. Thirty additional full time teachers have been employed to carry out this program. The classes run fifty-two weeks each year and the instructors teach fifty-two weeks each year.

"Morehead State Teachers College is one of the first sixteen colleges in the Ninth Naval District and is the first college in Kentucky to cooperate with the United States Navy in the establishment of a special Navy Training School (Electrical), which was instituted here June 1, 1942.

All of the administrative work of the Navy program proper is carried on by officers of the United States Navy. The Navy Staff has a force of ten commissioned officers in addition to the ship's company of forty, including petty officers.

"Everything possible for the convenience, comfort, and entertainment of the sailors has been provided. A canteen and completely equipped barber shop have been installed in the basement of Thompson Hall; a canteen has been set up in Men's Hall and a special student grill opened in the basement of Allen Young Hall.

TAKE CARE OF YOUR CAR

With these days of tire and gas rationing your car is more valuable than ever before. Don't forget it!

LET US HELP YOU!

Come in today and let our mechanic give your car a complete check.

GIVE YOUR CAR MILITARY CARE

Many major battles are lost, many campaigns a failure because of some oversight of some small flaw that was overlooked. That is why our military service is so particular about the minutest detail.

It is the little things that will count whether your car will last for the duration or whether you will be car-less.

Watch your brakes, your tire pressure, squeals and knocks. Don't overlook the slightest detail.

Let our staff of good mechanics give your car a once-over. We can keep you on the road for the duration.

The Midland Trail Garage

Morehead, Ky.

If the Government should go into business or professional competition with any of you gentlemen, do you know what it would be like? Well, you would have competition that—

1. Is not required to pay federal taxes.
2. Obtains all the money needed from the U. S. Treasury at little or no interest.
3. Makes up its losses out of the taxpayers' money — part of the taxes that you, as a competitor, pay to help offset these losses.
4. Purchases all materials at government discounts.
5. Gets transportation at a greatly reduced price.

6. Has free mail privileges.

7. Is not regulated by State or Local government... The federal government, as owner, is also the regulator.

Would you consider this fair competition? Would you object to it?

This is the kind of competition the 6,000 Kentucky stockholders and 1,100 employees of our company face now with TVA.

It is our problem today. But if this socialistic trend (government in business) continues, it will be your problem tomorrow. We must all fight to save individual enterprise and the American way of life that has made this nation great.

REDDY KILOWATT,
your electrical servant.

So. Hanover Ave., Lexington, Ky. Sparkman of Morehead, writes the following interesting letter from Italy:

Daily, June 3, 1944.

Dear Editor: Just a few lines to thank you for your kindness of sending me my home town paper. I get a lot of interesting news from it. And I hope you continue to send it to me. I like very much to read about my Morehead friends in the service. I have been receiving it regularly.

The second of June, '44, made me two years in the service with 21 1-2 months over sea. I was in England two months. I went on the invasion of North Africa, Sicily and Italy.

I have received three Bronze Stars and have been in many air raids. I am now serving in Italy waiting for the day to come for me to return home to be with my friends.

Yours truly,
T. S. ROY C. SPARKMAN.

Dear Folks:

The sensational stories coming out in the newspapers back home about the cruel and inhuman treatment of American prisoners by the Japs make us sick in the pit of our stomachs. However charged we may feel toward the Japs we still have enough left to think about you and our government which is just now spreading the truth that we have known for months. War is a lot more than Sherman's famous definition

A child's favorite your child should LIKE
BLACK DRAUGHT
Coughs, Cuts, Cuts as Directed

and it is time for all of us to get the facts and then face them so they will be solved in the shortest possible time. Whenever war stories are released several months after they have happened they make us feel that we are serving in the dark and you are producing war materials in the same light. And this is especially true when such stories do not in any way give out military secrets which would be help to the enemy.

The long drawn-out stories about the raid on Tokyo damaged our morale and left us with a prolonged hang-over. First we were led to believe it was the most successful raid in history without any serious loss on our side and then months later came a series of stories dramatized to the hilt that made our feelings reach a new low. The various news releases on that affair made us "Doubting Thomases" and now you can imagine how we feel about the very belated stories about the cruelties suffered by our armed forces when captured by the Japs. When anything is really bad you can hide it for a while but that does not make it less difficult to take and certainly not easier to stop such ghastly conditions. If such stories about the prisoners in Jap hands had come out months ago I am sure there would have been fewer strikes, more war goods produced for the defeat of the enemies, and a more determined confidence that we had to face the cruel facts of war and make the most of them.

We feel that you folks back home have enough common sense to use the truth to the best advantage and have the right to it when it does not affect our fighting the enemy. Most of the sensational stories released during the war have been very late getting to you and many of them could have been in the homes much sooner without telling the enemy any military secrets. We want you to know what we are

doing and feel you will be able to help get us back home much sooner if you know. The American Press has been the leader of democracy in our country because it was free to tell the truth and it is difficult for us to swallow their stories which are hot off the press when he know them to be hash left-overs that had red meat when they happened and a fighting nation should be fed the best. YOUR UNKNOWN SOLDIER.

Clearfield News

Green peas, one of the first garden vegetables, are ready for canning or will be soon. Miss Lorraine Harris, Rowan County Emergency War Food Conservation Assistant, along with foods specialist at the Kentucky College of Agriculture and Home Economics, emphasize the following points:

Check pint jars, rings, and lids to see that they are in perfect condition. Wash in hot, soapy water and boil jars. War-time rings should be boiled in water to which a tablespoon of soda has been added to each quart. Rinse well and scald with lids before using.

Select only young tender peas and, if possible, can within the hour. Shell and wash peas, then cook three to five minutes depending upon tenderness. Use only enough boiling water to cover. Pack in hot sterilized jars, cover with water in which peas are pre-cooked, add a half teaspoon of salt to each pint, and seal according to type of jar and lid using.

If a steam pressure canner is used, process in jars 45 minutes at 10 pound pressure. For your information four pressure canners are available locally. When the hot water bath or cold packer

method is followed, place the jars on a rack in a large container, having enough water to cover them by two inches. Begin counting time when water begins to boil furiously and process for three hours. Complete seal for type of jar.

A leaflet, *Cas Fruits and Vegetables For Victory* may be had from your Emergency War Food Conservation person on request. If you wish you may obtain a copy at the county agent's office or at any canning demonstration given in the county.

Midland News

Mrs. Carrie Bailey of Oklahoma is visiting her relatives here, Mrs. Bee Runner, Walter Mynher and Allie Mynher, all her first cousins.

Rev. Allie Black of Clearfield, is preaching each Sunday morning, and Sunday night at the Church of God at Midland in the absence of the pastor, Rev. G. M. Byrd, of Winchester, Ky., who with his wife spent last week end at Piqua, Ohio. From there they will go to Anderson, Ind., to attend the Church of God Campmeeting.

Mr. John Perry, of Cincinnati, Ohio, was visiting his niece, Mrs. Walter Mynher and Mrs. E. M. Thobold at Midland.

Mr. and Mrs. Johnny Runner are visiting Mrs. Runner's relatives in West Virginia.

Mr. Otis Flannery and wife and his brother, Karren Flannery, of Tennessee, are visiting Mr. and Mrs. L. E. Flannery, of Midland. Mr. and Mrs. Arlie Collins of Cincinnati, Ohio, their son, Arlie, Jr., and Wilma Jean were visiting relatives and friends here last week.

Miss Lillian Click of Lexington, was visiting her uncle and aunt, Mr. and Mrs. Fred Click.

The germ imbeds deeply. Can't be killed unless reached. Many liniments and ointments do not penetrate sufficiently. Ask any druggist for Te-d solution. Made with 90% alcohol, it PENETRATES. Reaches more germs. APPLY FULL STRENGTH for 10 to 15 minutes, twice a day. Locally at BISHOP'S PHARMACY.

Fairgrounds race course there. "Home In Indiana" will be shown at the Trail theatre Monday and Tuesday, June 25 and 26, at the Mills theatre Wednesday, June 27.

"Home In Indiana," a 20th Century Fox production stars Walter Brennan, Lon McCallister, Jeanne Crain, Charlotte Greenwood and June Haver.

I'M NO SOFTIE but this tire is!

I've learned a lot of things about tires during these months that I've been taking a man's place. Here are some of them:

- Avoid car tracks, ruts, rocks, rubbish
- Check air pressure weekly
- Inspect tires daily
- Don't scrape curbs
- Start and stop gradually—no jerks
- Ease car around corners
- Don't wait until fabric shows to recap
- Rotate tires; switch every 1,000 miles

In order to accommodate all our customers and help them to avoid the bootlegging and black marketing that is certain to follow the adoption of local option we have stocked our shelves as fully as possible in order to supply you. We want to serve you to the best of our ability.

We wish to take this opportunity to thank our many customers and friends for their many past favors.

AMBURGEY Dispensary

Rowan Soldier, In German Prison Camp, Asks For Chocolates, Cookies; Letters Censored

It took nearly three months for a letter from a German prison camp to reach the home of Mr. and Mrs. J. M. Horton, whose son, James, is a captive of the Nazis. The letter, received this week, is the second communication the family has received from their son. Two weeks ago the mail brought a postal card from him. Previously he had been reported as missing in action by the War department but his family never gave up hope that he was prisoner instead of being dead. The Postal Card and letter were relayed through by the American Red Cross.

In the following letter one can

do much reading between the lines. The stationery it is written on is evidently the same type as provided German soldiers. It shows that it passed through both German and United States censors. In one corner written in red pencil are the words "Broadcast NR." The paper the letter was written on is a cheap grade of book paper, not as good as United States soldiers use, indicating a possible shortage of paper in Germany.

The letter, dated March 2, reads: "Dear dad and mom: I will write you a few lines for a surprise. I know you are worried about me, but I am okay. I got sixteen let-

ters the day before I was captured. I was sure glad to hear from everyone. I am in Germany now. I am getting along just fine. I won't be allowed to write all I can. You can write to me as often as you please. You will be allowed to send me a package ever so often, and cigarettes now and then. If you send a package send mostly chocolates with some cookies. Go to the Red Cross and see the about sending packages. If you send them send them Trans-Atlantic. You can get a stamp for 30 cents. I will get them twice as quick that way. Tell everyone hello and be sure to write. Tomorrow I will be 21. Your son, James (Horton, Jr., P. F. C.)

neat job and the cooperation of the public is solicited." In order to paint this center stripe, it is necessary that the striping machine travel the center of the pavement. A yellow truck carrying a red flag will precede the striping machine. A flagman on this front truck will wave the traffic over to the extreme right side of the road in order that the striping machine can travel the center of the road. Signs marked "Keep to Right Fresh Paint" will be placed at intervals along the center of road of the freshly painted line and will remain in place until paint is dry. Under normal conditions the paint will dry in twenty minutes.

ing during the week or ten days before it can be recognized by the "whoop." Even then the physician is sometimes not called, and the children are allowed to play with others when they are known to be sick. Whooping cough may be very dangerous, but is taken very lightly by many parents. It causes as many or more deaths than scarlet fever, and nearly all the deaths occur in babies and small children under three or four years and is especially hard on delicate children.

Whooping cough begins very much like a common cold, dry cough and running nose. There develops spells of coughing. After 1 or 2 weeks becomes worse especially at night and vomiting follows spasms of coughing at this time one may look for whoops. Do every thing you can to protect your children from whooping cough. Teach them to stay away from children who seem to have colds and coughing, especially if whose cough is prevalent. If the child has not had the prevention and seems to be catching whooping cough have him inoculated at once as this relieves the distress.

Smallpox

In the past several years we haven't had a case of this terrible disease reported.

This is the result of the vaccination law that has been carried out. Each and every child should according to law be vaccinated for smallpox before entering first year of school. We urge all the children who are 2 years and older be vaccinated before entering school. Then they won't have to miss school or have sore arms while in school.

Summary of Immunizations
Year of 1943 and 5 months of 1944:

Diphtheria	1943	1944
Whooping Cough	52	48

Here Is Full Explanation Why Your Farm Electrical Connections Are Delayed

By E. R. MURPHY

KENTUCKY Utilities Company is always eager to serve farm customers who qualify for service under the various rulings of the War Production Board. The company will do everything within its ability to serve the farmer.

However, at times there may be delays in extending service although the customer meets all requirements and is entitled to get it. These delays are due to serious shortages of critical materials. This is why—

Shortage of manpower in the forests and slow transportation has caused a shortage of poles and crossarms for new line construction, and in some instances for the maintenance of the older existing lines.

Due To Military Needs

The demand by the military for radio, radar and other electrical equipment has contributed to a serious shortage of transformers. New rural and farm connections usually require individual transformers and delay in connecting these new customers may be necessary due to lack of transformers.

Mr. Edward C. Falck, Director of the Office of War Utilities,

says: "There is still a serious shortage of capacity to produce electric transformers of the size required for additional rural service because of heavy demands on electric equipment manufacturers for radio and radar type transformers. The War Production Board foresees no improvement in this situation for some time to come."

Shortage of Materials
THERE is a shortage of many critical materials which are essential to new electric services. These supplies are released to electric service companies in limited quantities when the war demand does not require the total production of the manufacturers. Therefore, conditions beyond the control of Kentucky Utilities Company may cause delay in giving service to new customers in rural areas.

If you qualify for electric service and have the permission of the County Agricultural Conservation Committee to receive this service, you may be assured that Kentucky Utilities Company will supply the service as quickly as the necessary supplies and equipment can be obtained.

PAUL Derringer, veteran pitcher of the Chicago Cubs, is "Mr. Big" generally speaking, when it comes to wearing baseball equipment. But Mike Naymick of Cleveland and Johnny Goss of the Pirates put in "large orders" when preparing to dress for baseball.

Derringer, for example, wears a size 30 shirt and orders a 7½ cap, which requirements make him just about the biggest all-around man on the diamond. Bob Newsum, who has settled down with Connie Mack, also wears a size 30 shirt, while Thornton Lee of the White Sox dons a 7½ cap, but Paul's head is bigger than Bob's, and his chest measurements top Lee's.

Naymick takes big hitters in the shoe department, his shoes demanding a set of 15½ hrogans, while Lee, who wears 6 foot 9 inches above the ankles, wears the longest uniform in the majors. Although his chest measurements are 40, 42, 44, Naymick's 12 inches longer than standard and his pants are 9 inches longer than the average player's requirements.

These facts, and others of a similar nature, are revealed by Jimmy Carrig, the "Golfsmith" man, who has been measuring major leaguers for the last 20 years and who can just about tell you how many times a given player can sneeze before the button pops off his collar.

Paul Derringer

THIS IS THE ONE THAT COUNTS!

They know! Every G. I. Joe knows! This is the big show. This is the pay-off. This is the one that counts. Sure, we're going to take 'em. But it's going to cost us plenty... thousands and thousands of lives... billions and billions of dollars. That's the price we must pay for a decent world—a world in which we and all children can live in peace. Rowan County's quota in the Fifth War Loan is \$150,000. Let's not only reach it but go over the top. BUY AND THEN BUY SOME MORE!
